

Assignment Two for ISEC 2000/5002

Total marks: 20 marks.

Due Date: 27/05/2016 (4:00pm)

Requirement: You need to finish this assignment independently. Submit your hardcopy of assignment and answer the following questions clearly.

1. In the process of implementing RSA, exponentiation in modular arithmetic is an important issue in computing

$$M^e \bmod n.$$

Read paragraphs in page 289 in the textbook (6th edition) and make sure you fully understand the technical content and implement the Algorithm in Figure 9.8. You are required to do the following:

- You code this algorithm in one programming language and make sure it can be used to compute $a^b \bmod n$ for positive integer numbers a, b, n with length less than 12 digits. Hand in the hard copy of your code with the demonstration of the following specific question.
 - Use your code to compute $198^{219469} \bmod 3921$ and print out the final result.
2. Implement RSA as in the following steps.
 - Select two prime numbers p and q using the algorithm in Question 3 of lab 2. The range of p and q is required to be between 10000 and 100000.
 - Using the Extended Euclid Algorithm to select $\{e, n\}$ satisfying $\gcd(e, \phi(n))=1$.
 - Using the Extended Euclid Algorithm to solve a private key d .
 - Covert each symbol on keyboard to its ASCII code for RSA encryption and decryption.
 - Implement RSA encryption and decryption using the algorithm in Question 1 of this assignment.
 - When you finish all steps above, you are required to encrypt and decrypt a text file. In your hard copy, state each step clearly with explanations in your code. The test file will be the same for DES in Assignment One which can be found in the unit website.

3. Assuming that Alice signed a document \mathbf{m} using RSA signature scheme. (You should describe RSA signature structure first). The signature is sent to Bob. Accidentally Bob found \mathbf{m}' such that $\mathbf{H}(\mathbf{m})=\mathbf{H}(\mathbf{m}')$, where $\mathbf{H}()$ is the hash function used in the signature scheme. Describe clearly how Bob can forge a signature of Alice's with such \mathbf{m}' . **Justify your forgery with the knowledge you learned from this unit.**
4. Mathematically prove the following assertion. Given two positive integers, a and b , prove the following.

$$\gcd(a,b)=\gcd(b, a \bmod b)$$
